

ZENIVA AI

NEW USER QUICK-START & RUN COMMAND MANUAL

You are currently at this prompt in VS Code PowerShell:

```
PS C:\Users\lbhupe\Downloads\zeniva-ai---ayurvedic-&-clinical-rag-healthcare-assistant>
```

Follow this exact step-by-step sequence to run both the **FastAPI Backend** and **Vite React Frontend**.

Step 0: Verify Software Installed on Your PC (One-Time)

Type these two commands to confirm you have **Python** and **Node.js** installed:

```
# 1. Check Python version (requires Python 3.10 or 3.11+)
python --version

# 2. Check Node.js version (requires Node 18+ or 20+)
node -v
```

Step 1: Install Dependencies (Only Needed the First Time)

Agar aapne project pehli baar download kiya hai, toh ye commands ek baar run karein:

```
PS C:\...\zeniva-ai> pip install -r backend/requirements.txt
# This installs FastAPI, Uvicorn, Pydantic, Requests, and ReportLab

PS C:\...\zeniva-ai> cd frontend ; npm install ; cd ..
# This installs all React, Vite, and Tailwind packages
```

Step 2: Start Backend Server (In Terminal 1)

Apne current VS Code PowerShell me ye command copy-paste karein aur Enter dabayein:

```
PS C:\...\zeniva-ai> python -m uvicorn backend.main:app --host 127.0.0.1 --port 8000
--reload
```

■ What You Will See in Terminal 1 (Success):

INFO: Uvicorn running on http://127.0.0.1:8000 (Press CTRL+C to quit)

INFO: Application startup complete.

Is terminal ko band mat karein! Isko chalta rehne dein.

Step 3: Open Second Terminal & Start Frontend (Terminal 2)

VS Code me top menu me jaakar **Terminal > New Terminal** par click karein (ya keyboard shortcut **Ctrl + Shift + `** dabayein). Ek naya terminal open ho jayega. Waha par ye type karein:

```
PS C:\...\zeniva-ai> npm run dev
```

■ What You Will See in Terminal 2 (Success):

VITE v8.2.2 ready in 450 ms

→ Local: <http://localhost:5173/>

→ Network: use --host to expose

Step 4: Open Website in Google Chrome or Edge

Apna browser open karein aur address bar me ye link daaliye:

Portal / Page	Exact URL to Open in Browser	Purpose
Main Web Application	http://localhost:5173	Full Patient, Doctor & Admin Interface
Interactive Swagger Docs	http://127.0.0.1:8000/docs	Test all backend APIs & SQLite database directly
System Summary PDF	http://localhost:5173/Zeniva_AI_System_Summary.pdf	Direct downloadable platform architecture PDF

Step 5: Login Credentials for All 3 Roles

Website open hone ke baad aap kisi bhi role se login kar sakte hain:

User Role	How to Access / Credentials	Special Notes
1. Patient Login	Enter any 10-digit mobile (e.g. 9876543210). Enter received OTP or click Demo Auto-Fill .	Creates active patient profile with Prakriti, Pranayama breathing card & OPD queue.
2. Doctor Login	Click Doctor tab > Enter phone number (e.g. 8766903403) > Click Register as Doctor if new.	Fill Council Reg No (MCIM), upload degree, and see countdown screen / verified OPD desk.
3. Super Admin	Click Admin tab > Username: bhupesh_admin Password: bhupesh@123	Unlocks all 20 Governance subpages, Doctor approvals, Video broadcasts, and Audit Logs.

Step 6: Troubleshooting & Common Fixes

Error Encountered	Cause	Exact Command to Fix
Execution Policy Error <i>scripts is disabled on this system</i>	Windows PowerShell default security restriction	Run in PowerShell as Administrator: Set-ExecutionPolicy RemoteSigned -Scope CurrentUser
Port 8000 already in use	Purana backend background me run ho raha hai	Run command: Get-Process python Stop-Process -Force Fir backend dubara start karein.
Port 5173 already in use	Vite dev server pehle se chal raha hai	Run command: Get-Process node Stop-Process -Force Fir `npm run dev` karein.
ModuleNotFoundError: uvicorn	Python packages install nahi hue hain	Run command: pip install -r backend/requirements.txt

Summary Checklist:

1. **Terminal 1:** `python -m uvicorn backend.main:app --host 127.0.0.1 --port 8000 --reload`
2. **Terminal 2:** `npm run dev`
3. **Browser:** Open `http://localhost:5173`
4. **Admin Password:** `bhupesh@123`
